

The Company

Evolution aims to provide the highest quality total water treatment, water hygiene and consultancy service packages to the building services maintenance, education, facilities management and healthcare sectors, in addition to end user clients.

Evolution's "in house" Consultancy team has provided informal training courses to existing clients for many years. In response to requests for an accredited, relevant and focused course that outlines and explains the key issues within HSC's ACoP & Guidance L8 documentation, Evolution has developed a specific course that carries City & Guilds accreditation.

The course provides information on current legislation and guidance in respect of day-to-day legionella management and control, together with the implementation of "suitable and sufficient" water hygiene and treatment regimes for typical buildings' water services.

evolution
Leaders in Water Treatment & Water Hygiene

Training forms just one part of the market leading services offered by Evolution Water Services Ltd.

Legionella Awareness Training Course

Course Objective

To provide delegates with awareness and key knowledge when operating different types of water systems, including details of safe maintenance and management requirements for such systems and how to ensure that control measures and monitoring practices are correctly implemented, in order that compliance with relevant statutes and guidance can be demonstrated.

Who should attend

The course is aimed at anyone having involvement with the day-to-day management and undertaking of legionella control/water hygiene works, including implementation personnel, site/contract managers, system operators, maintenance/engineering personnel and those with responsibility for ensuring that such tasks are carried out.

The Trainers

The training is delivered by Evolution's experienced "in-house" trainers, each of whom has substantial in-depth and practical knowledge of all types of buildings' water systems and their maintenance.

Course Overview

- A brief history of Legionnaires' disease
- Medical aspects of Legionnaires' disease
- A legal overview
- Case studies of actual outbreaks
- The importance of undertaking a suitable and sufficient legionella risk assessment
- Implementing and managing control regimes/measures
- Water sampling
- Cleaning and disinfection of water systems
- Record keeping and the management of site records

All delegates will receive a training pack immediately prior to course commencement, which will include a copy of the course material.

The course concludes with a short verification test.

Certification

A City & Guilds accredited certificate will be awarded to all delegates following successful completion of the course verification test.

Course Feedback

96%

...had a good overall impression of the training course.

95%

...said the course exceeded expectations.

97%

...would recommend the course to others.
